The Canadian-dollar effective exchange rate index (CERI) replaces the C-6 index as the Bank's new measure of the value of the Canadian dollar vis-avis the currencies of its most important trading partners. I L'indice de taux de change effectif du dollar canadien (indice TCEC) s'agit du nouvel indice que la Banque utilise pour mesurer la valeur du dollar canadien par rapport aux monnaies des principaux partenaires commerciaux du Canada. L'indice TCEC remplace l'indice C-6.

(1) Note. Although the target is expressed in terms of the total CPI, the Bank of Canada bases its policy actions on a core measure of the CPI that excludes eight of the most volatile components (fruits, vegetables, gasoline, fuel oil, natural gas, mortgage interest, inter-city transportation and tobacco products) as well as the effect of indirect taxes on the remaining components.

Nota: Bien que la cible soit exprimée en fonction de TIPC global, la Banque du Canada fonde ses décisions de politique monétaire sur un indice de référence qui exclut de TIPC huit des composantes les plus volatiles (fruits, légumes, essence, mazout, gaz naturei, intérêts hypothécaires, transport interurbain et produits du tabac) ainsi que l'effet des impôts indirects sur les autres composantes.

I Indice de référence - Indice des prix à la consommation excluant huit des composantes les plus volatiles de l'IPC (fruits, légumes, essence, mazout, gaz naturel, intérêts hypothécaires, transport interurbain et produits du tabac) ainsi que l'effet des impôts indirects sur les autres composantes. Le numéro d'identification CANSIM de cette série (données exprimées en niveaux) est V41683242.

CPIXFET: The CPI excluding food, energy and the effect of indirect taxes. I IPCHAEI: IPC hors alimentation, énergie et effet des impots indirects

CPIW. In this measure, each component of the total CPI is multiplied by an additional weight that is inversely proportional to the component's volatility, so that the more volatile the component the less it influences the overall index. I Dans IPCP, chacune des composantes de l'IPC global est multipliée par une pondération additionnelle qui est inversement proportionnelle à la variabilité de la composante, afin que les plus volatiles d'entre elles influencent moins l'évolution de l'indice global.
